800 – PLESK DOMAIN SETUP

To set up a domain in IMSHP (PLESK), perform the steps in the following table.

Action	Result
1. Open a browser instance.	
 Point the browser to <u>http://www.isinta.com</u> or to tech.my303.net. 	Weicewei Mass Ausdau Editration Weise Weise Weiseweise Weiseweise Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State State Image: State State State Image: State State State Image: State State State Image: State State State State Image: State State State Image: State State State Image: State State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State State Image: State State Image: State State State Image: State State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State State Image: State Image: State Im
3. Scroll down the page and click INSTAHP :	The system displays a message about the certificate: Safari can't verify the identity of the website "ip-208-109-105-120.ip.secureserver.net". The certificate for this website was signed by an unknown certifying authority. You might be connecting to a website that is pretending to be "p-208-109-105-120.ip.secureserver.net" which could put your confidential information at risk. Would you like to connect to the website anyway? (?) Show Certificate
